Directive 2014/34/EU ATEX

Products classified for use in potentially explosive atmospheres

The ATEX Directive 2014/34/EU (equipment and protective systems intended for use in potentially explosive atmospheres) of the European Parliament of and the Council of 26 February 2014 concerns the harmonisation of the laws of the Member States relating to equipment and protective systems intended to be used in potentially explosive atmospheres.

The European "ATmosphère EXplosible" Directive, called ATEX, is required by the law of all the EU Member States since 1 July 2013 and it concerns all the products marketed in the European Union intended for use in potentially explosive areas.

The first issue in 1994 has been replaced by the **2014/34/EU Directive**, which finally came into force on 20 April 2016.

- The Directive includes non electrical equipment and devices, such as pneumatic cylinders
- The devices are assigned to categories that are assigned to specific potentially explosive areas
- · The devices must bear the CE-Ex marking
- Products designed for use in potentially explosive areas must be accompanied by instructions for use and declaration of conformity
- Products indented for use in potentially explosive areas due to the presence of dusts as well as hazardous gases are included in the directive.

A potentially explosive atmosphere can be composed of gases, mists, vapours or dusts which can originate in factories or in all areas with constant or occasional presence of flammable substances. An explosion can take place in case of simultaneous presence of flammable substances and a source of ignition in a potentially explosive atmosphere.

A source of ignition can have:

- Electric origin (electric arcs, induced currents, heat generated by the Joule effect)
- Mechanical origin (hot surfaces generated by friction, sparks generated by impact between metal bodies, electrostatic discharge, adiabatic compression)
- Chemical origin (exothermic reactions between materials)
- Open flames

Products implying one or more sources of ignition for potentially explosive atmospheres during normal use or caused by malfunctions are subject to approval.

The producer must ensure the conformity of the product to what is declared and indicated on the marking of the product itself.

The product must always be accompanied by the relevant instruction. The machinery manufacturer and/or user must identify the risk zone the products are used in, with reference to the Directive 99/92/CE, and buy the product complying with the use in the provided zone, paying attention to the relevant instructions.

If a product is composed of 2 components with different marking the component belonging to the lower category determines the category of the whole product.

Example:

Coil suitable for Category 3 (zone 2/22), marked Ex - II 3 EEx... Valve suitable for Category 2 (zone 1/21), marked Ex - II 2 EEx...

The combination of valve and coil can only work in Category 3 (zone 2/22).

EQUIPMENT CLASSIFICATION

Group I Min	ning equipment	
CATEGORY	PROTECTION LEVEL	APPLICATIONS
M1	Very high	Equipment which can be used in presence of explosive atmospheres
M2	High	Equipment which must be not operated in presence of explosive atmospheres

Group II Surface equipment					
CATEGORY	PROTECTION LEVEL	APPLICATIONS	GAS ZONE	DUST ZONE	
1	Very high	Presence of explosive atmosphere: always, frequently and for long periods of time	0	20	
2	High	Presence of explosive atmosphere: probable	1	21	
3	Normal	Presence of explosive atmosphere: low probability and for a short period of time	2	22	

Explosion group		
II	II For all gases of Group II, if protection class requires it. Ex. "nA" See EN.50021	
IIA	IIA For all gases of Group IIA, if protection class requires it. Ex. "ia" See EN.50020 IIB For all gases of Group IIA - IIB, if protection class requires it. Ex. "ia" See EN.50020	
IIB		
IIC	For all gases of Group IIA - IIB - IIC, if protection class requires it. Ex. "ia" See EN.50020	

TEMPERATURE CLASSIFICATION

Group I Mining equipment
Temperatures ≤150°C or ≤ 450°C according to the dust layer
that covers the device

Group II Sur	Group II Surface equipment				
T-Class	MAXIMUM SURFACE TEMPERATURE	MINIMUM IGNITION TEMPERATURE OF GASES			
T1	450 °C	>450 °C			
T2	300 °C	>300 °C - ≤450 °C			
T3	200 °C	>200 °C - ≤300 °C			
T4	135 ℃	>135 °C - ≤200 °C			
T5	100 °C	>100 °C - ≤135 °C			
T6	85 °C	>85 °C - ≤100 °C			

HOW TO READ THE MARKING

EXAMPLE OF ATEX MARKING

Type of equipment

Mechanical

- **C €** = European Community Mark
- (Ex) = Conformity Mark with reference to Directive 2014/34/UE and relevant technical rules
- II = Group II, equipment for surface industries
- 2 = Equipment of Category 2
- G = Equipment for use with GAS zone 1 and 2
- D = Equipment for use with DUSTS zone 21 and 22
- c = Type of protection applied, i.e. constructional safety (EN 13463-5)
- IIC = GAS Group
- **T5** = Temperature class (GAS)
- T100°C = Maximum surface temperature (DUST)

COMPONENTS AND ACCESSORIES WITHOUT ATEX CLASSIFICATION

Accessories for UNIVER products (fittings, silencers, nipples, nuts, tubes, reservoires, pressure gauges, manual valves, check valves, quick exhaust valves, blocking valves, selectors, limit switches and any other accessoires which can be attributed to various product families) can be used in ATEX zones 1,2 and 21,22.

The accessories are not sources of ignition if assembled correctly according to instructions for use and maintenance, therefore they can't change in any way the classification of the products they are assembled on, in compliance with the directive 2014/34/EU.
